

For Immediate Release

Latitude Technologies' new Universal Data Gateway for SwiftBroadband

Latitude Technologies of Victoria, British Columbia announced today the newest addition to the Latitude product family, the Universal Data Gateway "UDG100". The Universal Data Gateway is a SwiftBroadband Inmarsat I-4 accessory device designed for aircraft systems integration, flight tracking and anomaly reporting. The UDG100 weighs less than a pound, allows for simple installation via Ethernet connection and is highly configurable for mission profile reporting. In addition, with a built-in 'G switch' the unit can be remotely configured to send specific messages based on G-force in any axis at different rates on the airframe.

The unit has data logging capability and allows for remote polling and configuration. Event reporting can be set with transmission intervals as low as 1 second, far exceeding any reporting requirements or capability found in the market today. By combining the new UDG100 with Latitude's LWS Sentinel™ data reporting, messaging and flight following service our customers will achieve unsurpassed data management including "OOOI" flight scheduling alerts.

To see the new UDG100 please visit us in **Booth 4719 at the NBAA** show in Orlando, Florida October 20-22, 2009 and **Booth 1031 at the AMTC** show in San Jose, California October 26-28, 2009.

About Latitude Technologies

Latitude Technologies Corporation, headquartered in Victoria, British Columbia, is a global supplier of aeronautical voice and data equipment and airtime services. Latitude's family of products includes the smallest, lightest, most versatile and economical to operate 2-way data networking and messaging devices in the world. Our products are supported by the LWS Sentinel™ data reporting, messaging and flight following service.
